

Project Categories

Standardisation

Standardisation (we shall)

- Programmes that have been agreed as the single, common approach to address a particular issue
- It is expected that once approved by SLG as an industry standard, they are a stated contractual requirement and cascaded through the contractual relationships by ALL Safer Together members
- It is anticipated that 100% of Safer Together members will adopt the programme where it is applicable to their business activities

e.g. Industry Safety Induction

Major Sharing

Major Sharing (we should)

- Programmes identified with the potential for a significant safety performance improvement if adopted across the industry
- It is anticipated that an identified and relevant population should, through industry leadership, adopt the programme where it is applicable to their business activities

e.g. Contain It!

Sharing

Sharing (we may)

- Programmes identified with the potential for a positive safety performance improvement if adopted by a member company.
- Sharing programmes are about cascading good practices across industry; they address a specific need and should have a direct benefit to a local business unit. By their nature they have an implicit benefit to the entire industry but this is not their objective

e.g. Safety Moment Cards
