

Safer Together Initiative Categories

Standardisation Initiative – Specification (“we shall”):

- Specifications that have been agreed as the single, common approach to address a particular issue
- It is expected that once approved by SLG as an industry standard, they are a stated contractual requirement and cascaded through the contractual relationships by ALL Safer Together members
- It is anticipated that 100% of Safer Together members will adopt the program where it is applicable to their business activities

e.g. Industry Safety Induction

Major Sharing Initiative – Product or Program (“we should”):

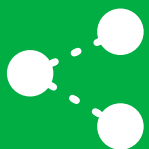

- Products or Programs identified with the potential for a significant safety performance improvement if adopted across the industry
- It is anticipated that an identified and relevant population should, through industry leadership, adopt the product or program where it is applicable to their business activities

e.g. Assist and Assure

Sharing Initiative – Product or Program (“we may”):

- Products or Programs identified with the potential for positive safety performance improvement if adopted by a member company
- Sharing products or programs are about cascading good practices across industry; they address a specific need and should have a direct benefit to a local business unit. By their nature they have an implicit benefit to the entire industry but this is not their objective

e.g. Effective Safety Conversations
